1956, v. 11, no. 2, p. 185-188.

Experiments showed that niobium 8-hydroxyquinolate
can be extracted rapidly and quantitatively by a
number of organic compounds, at p^H 6-9, from
solutions containing 2.5% of ammonium tartrate or
citrate; tantalum and tungsten 8-hydroxyquinolates
are not extracted by organic solvents under these
conditions. Methods for separating niobium from
tantalum by extraction of the 8-hydroxyquinolate
with isocamyl alcohol, and from tungsten by
extraction of the 8-hydroxyquinolate with
chloroform, were developed.
